

CeramiCircuit™ Portable Heater

Model 1624SS • 1000 Watts
Stainless Steel Construction
High Efficiency Ceramic Infrared Panel
“The Ultimate in Comfort Living”
Silent • Reliable • Economical

Completely solid-state. Remains cool to the touch after hours of use.
Heating element does not glow during operation.

The CeramiCircuit™ Portable heater provides rapid response comfort, reaching full heating output in 5 - 7 minutes. The stainless steel construction assures long service life as well as a non-allergenic alternative for the chemically sensitive individual. Odors associated with other heating sources are thing of the past thanks to the low temperature at which the heating element operates. This eliminates the “fried dust syndrome” of airborne contaminants burning on red-hot heating elements, which is so common with other heaters operating at higher temperatures. The built-in thermostat provides reliable temperature control for your comfort. Internal tip-over switch shuts the heater off if it should be knocked over. Eight foot grounded power cord. Intended for indoor use only. Optional wheels shown.

It is a pleasure to write and tell you how much I enjoy my stainless steel radiant heater. I like everything about it, but most of all the help it has been to me to find and use a safe source of sufficient heat. My extreme chemical sensitivities made it impossible for me to use any other form of heater and, for a long time, even the central heat in my home. I don't know how I would have endured and healed if not for your heaters. I am very much improved and enjoying a quality of life I never imagined regaining. I continue using your heaters in my home, not only for the warmth and enjoyable comfort they provide, but also to insure that I never again become that sick and disabled. We have purchased a third one to send to a family member and highly recommend them to anyone. The stainless steel, the ceramic, the rigid construction and the chemical free aspect all go into making this a life-saver for the many many thousands of people like me who had suffered so much. Thank you.
Julie W., Nashville, TN Feb. 2003

I would like to comment on the positive experience I have had with the radiant heater system. A few years ago I was diagnosed with environmental illness and had many sensitivities to chemicals. We had a natural gas heating system in our home. I was having terrible ill effects from the burn-off from the gas. We were advised by my physician to find an alternative heating system, and through research we came across Radiant Electric Heat, Inc. We installed the radiant heating system in our home, and in this way were able to eliminate a big source of exposure. I was much better after having taken out the gas system and having the new system installed. During the process of installation, the personnel at Radiant Electric Heat, Inc. were very helpful. We have had the system for several years now, and it functions perfectly, just as it did when it was first installed. The heat is very clean and comfortable.
